

GERARD VITO J. BELARDO

(+63) 917 821 4244 | Malate, Manila

gv.belardo@gmail.com | linkedin.com/in/gvbelardo | github.com/Shioxri

SUMMARY

4th-year Computer Science student and DOST–MERIT Scholar with strong front-end web development skills, experience across backend and mobile development, and machine learning data analysis.

EDUCATION

De La Salle University Manila

September 2022 – Expected 2026

Bachelor of Science in Computer Science Major in Software Technology

- **CGPA: 3.660 / 4.000**
- **Consistent Dean's Lister**

PROJECTS

Story Reading Companion Chatbot for Children (STELLA)

Technologies: *APIs, Python, LLM, PineconeDB, RAG*

- Implemented a RAG-based pipeline to retrieve context-relevant sections from the story and to generate accurate chatbot responses
- Designed a structured conversation flow that kept discussions on-topic and guided children through reading comprehension questions.
- Improved prompt design and response validation, increasing message classification accuracy **from 50% to 83%**.

Enrollment Management Website (D-Enroll)

Technologies: *React, Node.js, Express.js, MongoDB, Docker, gRPC*

- Built a web-based enrollment system with dedicated student and professor interfaces, implementing **8 core features** integrated with gRPC-based backend services in a Docker-based microservices architecture

Family Income Classification Analysis

Technologies: *Python, Jupyter Notebook, Pandas, NumPy*

- Trained and compared KNN, multinomial logistic regression, and neural network models for household income classification on a **40K+ record dataset**.
- Achieved **93.89% validation accuracy** using the neural network tuned with Optuna outperforming KNN and multinomial logistic regression.

Android Fitness and Habit Tracking Application (SoloFit)

Technologies: *Kotlin, SQLite, Android Studio, REST APIs*

- Designed and implemented **24 app screens**, including dashboards, progress tracking, and daily streak features.
- Used SQLite for local data persistence to store workouts and daily summaries.

Participant Data Management Web System (Pharmalytics Profile Tracker)

Technologies: *React, Node.js, Express.js, MongoDB, GitHub Actions, CI/CD*

- Worked in a Scrum team of 8 to develop a participant data management system with role-based access, full CRUD functionality, and Excel data export.
- Contributed as Product Owner and Business Analyst by defining requirements and designing wireframes for **10+ screens** through user stories and sprint planning.

SKILLS

Frontend

React, TypeScript, JavaScript, HTML, CSS

Backend

MySQL, Node.js, MongoDB, Express.js, SQLite, Firebase, PineconeDB

Languages

C, C++, Java, Python, Kotlin, Ruby

Tools

Git, Docker, Android Studio, Figma
